

LAW ENFORCEMENT EFFORTS REDUCING FLOOD RISK IN PALEMBANG CITY

Azhar Azhar

This Article aims to identify law enforcement in the City of Palembang, analyze the performance of officials in granting permits to transfer the function of wetlands to land built, and examine law enforcement in an effort to reduce flood risk. The explanatory survey was used in this study. The sampling technique was done in random sampling. Data was processed descriptively, and also using qualitative and quantitative analysis. This study was carried out through observation, in-depth interviews, documentation and audio visual. The result shows that there still exists a legal vacuum, the lack of commitment of authorities in enforcing the law relating to the reduction of the risk of flooding, lack of facilities and infrastructure landfills and drainage, the lack of culture to dispose of waste in place and the lack of public awareness of the risk of flooding.
